

DISPOSABLE SCALPELS

Henry Schein scalpels are sterile, ready for use and consist of a stainless steel surgical blade attached to a medical-grade plastic handle. Its use as a disposable scalpel eliminates the need for time-consuming pre-treatment by disinfection with chemicals, heat or radiation. A controlled sharpening and heat treatment ensure consistently sharp, durable and strong blades. Easy-to-read graduated measurement marks (in millimetre scale) are on the handle to help determine incision length. **Henry Schein scalpels** are individually-packaged in a pre-sterilized peel-open blister pack.

FEATURES & BENEFITS

- Single use to prevent cross contamination
- Pre-sterilised by gamma irradiation with a 5 year shelf-life (unopened)
- Excellent cutting properties
- Brand name and size are clearly engraved onto each handle for easy identification
- Ergonomical scalpel handle with rigid blade guard
- Handle is made of gamma stable, biocompatible plastics
- UDI compliant barcode labels
